Objective

High-impact ECE Graduate (2025) with a critical system-level perspective and hands-on expertise in embedded systems and hardware-software integration. I am proficient in coding, testing, and complex problem-solving, dedicated to full-stack software development. A proven collaborator who thrives within an Agile development environment, I am committed to continuous learning and effective teamwork. Seeking to apply technical skills to deliver high-quality, cost-effective solutions that drive organizational goals.

Education

B-Tech in in Electronics and Communication Engineering , Vignan's Nirula Institute of Technology and Science for Women, Guntur CGPA: 7.5/10	2021 – 2025
Intermediate (MPC) , S.V.K.P Junior College, Sattenapalli Percentage: 73.3	2019 – 2021
Secondary Education (BSEAP) , Sri Chaitanya School, Sattenapalli CGPA: 9.3/10	2018 – 2019

Skills

• Programming Languages:	<i>C, Java, SQL, JavaScript</i>
• Web Development(Front-End):	<i>HTML, CSS, BOOTSTRAP, REACT.JS</i>
• Core Programming Languages:	<i>Phyton, MATLAB/Octave, VHDL, Arduino Uno</i>
• Core Sub Domain:	<i>VLSI, SS, IOT, ES, DSP</i>
• Web Development(Back-End):	<i>Node.JS</i>
• Tools:	<i>MYSQL WORKBENCH 8.0 CE, ECLIPSE IPE, POST MAN</i>
• Soft Skills:	<i>Problem-solving, Communication, Adaptability, Teamwork</i>

Experience

JAVA FULL STACK WEB DEVELOPMENT Intern , EXCELR SOULTION	June 2023 – May 2024
• I contributed to the development of robust back-end systems using Java and Spring Boot, ensuring scalability, security • Created a service efficient data processing, and Learning utilizing version control systems like Git code changes, collaborating with team members, and maintaining code integrity • Designed responsive web pages using HTML5, CSS3, and JavaScript. • Developed dynamic navigation menus and interactive features. • Automated extraction and processing of large datasets from legacy systems using SQL and Perl scripts	
Virtual Internship On VLSI , Skill Dzure	2024(2-months) May-Jun
• Mastered the complete VLSI Design Flow, from specification to tape-out, utilizing industry-standard EDA tools. Applied core principles, HDLs (VHDL/Verilog), and FPGA implementation (Xilinx) to design and verify complex digital circuits for ASIC/FPGA applications, ensuring rigorous timing and power efficiency. • Developed expertise in critical backend and frontend VLSI stages, including logic synthesis, timing analysis, and physical design optimization. Successfully executed projects in digital clock domain crossing (CDC), high-speed Serializer-Deserializer (SerDes) design, and microcontroller integration.	
Telecommunication Internship ,South Central Railways	2025(3-months) JAN-Mar
• Led technical training sessions for ECE interns on railway telecom systems and sensor applications (e.g.,	

- track-side sensors), significantly enhancing the team's understanding of ST infrastructure and safety protocols.
- Analyzed and documented the functional integration of rail control communication and sensor systems (e.g., OFC, digital exchanges), ensuring system reliability and adherence to operational standards.

Projects

1. E-commerce Website “A Back-end Application of an E-commerce Website”

- In the E-commerce project, I managed MySQL databases, ensuring data integrity efficiency. This involved designing database, optimizing queries, and implementing security measures. In addition i collaborated with developers to integrate database functionality seamlessly into the e-commerce platform.
- Developed features allowing students to post, update, and manage questions within a public community, fostering engagement and collaboration
- Tools Used: MYSQL WORKBENCH 8.0 CE, ECLIPCE IPE, POST MAN SQL, Java Script

2. Traffic Monitoring System (IOT Mini – Project) “The Controlling and Monitoring of Traffic”

- Designed and developed an intelligent IoT-based traffic management system utilizing Arduino, sensors, and Wi-Fi modules to optimize traffic flow. Implemented real-time traffic signal control algorithms, reducing congestion by 30
- Integrated with RFID and camera modules for vehicle detection and automated traffic rule Successfully deployed and tested on a scaled-down city infrastructure model, demonstrating 25
- Tools Used: (hardware Tools) Power Supply, Arduino UNO, Traffic LED set, IR sensor, Liquid Crystal display (Software Tools) Arduino IDE, Proetus, Code develops through Embedded C

3. Movie Ticket Booking “A Back-end Application of an Movie Ticket Booking”

- In the Movie Ticket Booking project, I managed MySQL databases, ensuring data integrity Payment integration part On line movie ticket booking system is the process by which customer can purchase their movie tickets directly using the internet and pay through online banking
- An online movie ticketing system is a digital platform that allows customers to access the services of a business, reserve seats and buy tickets.
- Tools Used: Java Scrip, SQL,

4. Autonomous Line Following Robot (IOT Major – Project) “Transporting Good From One Place To Another Without Man-Kind By Using Raspberry Pi”

- In the Designed and developed an autonomous robot using Raspberry Pi for efficient goods transportation in industrial settings. Integrated RFID, infrared sensors, motor drivers, and magnetic coupler for precise navigation and goods handling.
- consolidates the results and impact 30 percentage productivity increase, reduced manual labor, enhanced accuracy
- Tools Used: (Hardware Tool) Raspberry pi, Motor Driver, IR Sensors, Servo motor, Magnetic Coupler (Software Tool) Embedded C, Arduino IDE

Extra-Curricular Activities

NSS Student Member (2022 - 2024): Participated in more than 10 NSS events and activities as a volunteer

Participated in multiple national-level hackathons: Myntra Hackathon and L'Oréal Hackathon, demonstrating strong collaboration, rapid prototyping, and innovative problem-solving under tight deadlines.

Self Declaration

I hereby declare that the information provided above is true to the best of my knowledge and belief.
